## DIARY

{ ASTRONOMICAL  
AND  
ASTROLOGICAL }

For the year of Grace 1665.

It being the First after the  
*Bissextile, or Leap-year.*

CONTAINING

1. The Motions and Aspects of the Planets, Eclipses of the Luminaries, Full Sea, Tides and their Returns, Monthly Observations, Weather, &c.
2. A General Judgement on the Year from the Suns Ingress into the Vernal Equinox.
3. A Short Discourse of the holy Feast of *Easter*: With other things of necessary Use and Consequence.

---

BY  
JOHN GADBURY,

*Ἡμερολόγιος.*

---

*Non multa, sed multum.*

---

LONDON:

Printed by *J. Cottrell*, for the Company of Stationers.

AN ADVERTISEMENT  
Concerning a late Abuse cast upon the Author.

**T**Here is one, (whose Name and Character I shall spare, they being too well known unto many both in London and elsewhere) that hath lately in Print been pleased to cast some *Aspersions* upon me; whom I look upon as no other then the *Hiveling* or *Instrument* of my old Enemy *N.L.*, a man I shall scarce so much as name hereafter, (unless again insolently provoked by him) being somewhat sorry that formerly I thought there needed any thing more, then his own *Writings* and *Actions*, to declare him to the world both *infamous*, *ignorant*, and *envious*. And for this forward *back-friend* of mine, that hath as *falsly* as *reasonlessly* attempted to make a *breach* upon my *reputation*, and would be thought capable of *Correcting* the *Verb*, before he truly understand the *Noun*; As I esteem him no way deserving my good word, I shall scorn to expend an *ill one* upon him.

*Irrita vaniloque quid curas specula lingua,  
Latrantem curatne alta Diana canem?*

I am so far from attending or minding Controversies, at the present, that all my leisure to me, I finde too little, to employ about my intended **BODY** of **ASTROLOGIE**; in which I have made a considerable Progress: but the Work being great, it will not, cannot see the light suddenly.

---

*The Authors Request, unto such as salute him by Letters.*

**I** Shall desire all such as send Letters unto me about business concerning themselves, that they would convey them by the hand of some friend in *London*, who may likewise call upon me for an Answer: for although I am very willing to gratifie each persons request, that is a lover of Art; yet my want of time prevents me of waiting upon the Post, or Carriers, to serve them. By reason whereof, many that have sent unto me, have failed of their expectations. Of this I thought fit to give Notice, that none (for the future) may be disappointed.

Gentlemen!

**I**N my last years Ephemeris I endeavoured to perswade with you, and gave you some encouragement to be curious in your collecting of all childrens Nativities (Males especially) that were born in the years 1657 and 1658, and of such as should be born on September the 4 and 5 days last year. And some of you I have found so industrious therein, that you have not onely approved your selves friends unto the Truths of *NRANIA*, but so respective unto me, as to communicate your Observations: And I hope there is none of you have reason to say that I have dealt below the line of my promise with you, but have freely (as I have been requested) not onely compared, but exchanged Notes. And unto the true *Amicus*, or Lover of Art, shall yet be willing to hold and continue the same correspondence.

And to the end that Astrologie may not want the support that my mean capacity is able to afford it, either at the present or in future, I have resolved with my self to keep a Register of all Nativities that come unto my hands: And when it shall please the God of knowledge to translate me from my Studies here, I shall commit such my Collections (with my Observations thereon) to some one, that I shall finde most able in, and deserving of such matters; with an Injunction for the permitting all industrious Students the perusal thereof, or to take Notes therefrom, as they shall be required to good ends.

And if any person or persons, of parts capable (for *Astrologus* (as well as *Poe'ta nascitur, non fit*) shall, in this great and populous City of London, or in any other place whatsoever, undertake the same, I shall be so far from being angry thereat, that I shall rather be transported with rejoycing, that my project here propounded may meet with such friends, as will use their skill and industry to promote it; for the bringing to perfection so excellent and useful a Science as is Astrologie.

In this designe, my friend I be advised to set self-interest, partiality, and flattery apart; despise not the meanest persons Nativity, neither be proud of the greatest: but take all, and be exact, punctual, and faithful, in thy Observations: Thereby thou wilt bring such honour to thy self and Science, as is wished by

Thine and Astrologies Vorary,

A 2

John Gadbury.

# The ROYAL TABLE.

The Kings Names.	Year born.	Their Reigns beginning.	Time regnant	Since their Reigns ended.

Charles 2	1630	Januar. 30	1648	Vivat, Viget, Vincat.

Kings have their various Fates, as meaner men;

Encounter Gloomy, well as Glorious years :

The Cross accompanies their DIADEM,

To shew their Joys are (often) mix'd with Fears.

Considering the Cares a Crown doth bring,

'Tis Piety to pray,

GOD SAVE THE KING.

# A Table of Terms for the year 1665.

Return Days, or Days of Effoyn.	Dayes of Exception.	Returna Brevium.	Days of Ap- pearance.
------------------------------------	------------------------	---------------------	--------------------------

Hilary-Term begins *JANUARY 3.* ends *FEBRUARY 12.*

Oftab. Hill. Jan. 21	January 21	January 23	January 23
Quind. Hill. Jan. 28	January 28	January 28	January 31
Craft. Purif. Feb. 3	February 3	February 3	February 4
Oftab Purif. Feb. 10	February 10	Februa. 11	February 12

Easter-Term begins *April 12.* ends *May 8.*

Quind. Pasc. April 10	April 11	April 11	April 12
Tres Pasc. April 17	April 18	April 19	April 19
Mens. Pasc. April 24	April 24	April 26	April 27
Quinq. Pasc. May 2	May 2	May 3	May 4
Craft Ascen. May 5	May 5	May 6	May 8

Trinity-Term begins *May 16.* ends *June 14.*

Craft. Trin. May 22	May 23	May 24	May 26
Oftab. Trin. May 29	May 30	May 31	June 1
Quind. Trin. June 5	June 6	June 7	June 8
Tres Trin. June 12	June 13	June 13	June 14

Michaelmas-Term begins *Oftober 23.* ends *Novemb 30.*

Tres Mich. Octob. 20	Oftob. 21	Oftob. 21	October 23
Mens Mich. Octo. 27	Oftob. 27	Oftob. 30	October 31
Craft. Anim. Nov. 3	Novemb. 4	Novemb. 6	November 7
Craft. Mart. Nov. 11	Novem. 13	Novem. 14	November 14
Oftab Mart Nov. 18	Novem. 20	Novem. 21	November 23
Quind. Mart. Nov. 25	Novem. 27	Novem. 27	November 28

Litigiousness is bow'd unto by all;  
 She's grown a Goddess Epidemical!  
 And all her Nets of Envie casts about,  
 T'engage the Sober, well as Rabble-rour,  
 Unto her Sport and Game: That but for Law,  
 Men (like wilde Brutes) could not be kept in Awe.

PAX EST DULCISSIMA RERUM.

January hath xxxi days.

Great Europe's glory with the Springing year,  
(In all respects) doth happily revive :  
Her Patriots Black terrour need not fear ;  
Her wasted Countries (now) afresh do thrive.  
Her publike Pagan-enemies abate ;  
Her private Rebels less infest each State.

# March hath xxxi days.

To high windes, words and actions, March gives date,  
 And threatens dangers to some Northern State :  
 Some play a Comets part, and blaze a while ;  
 And (whon their Matter's extinct) become vile.  
 Poor England now, would have a trembling heart,  
 But that the \* God of Battels takes her part.

Scots cross the river Tyne. 1644

Sir Henry Hyde beheaded 1650

New Moon at 9 at night.

D. Hamilton, E. Holland }  
L. Capel beheaded } 1646

First Quarter at 10 in the morn.

18 d. The present K. of Denmark  
born, 1609. See his Nativity in  
my Collection of Nativities, fol 36  
Full Moon at midnight.

If you reckon from April 10, last  
year (upon which day Easter fell)  
unto March 26, upon which it falls  
this year, you will finde but 390  
days inclusive: so that we shall  
have this year (i. e. within less  
than 365 days) two Easters. See  
more of this, in the Discourse at  
the latter end of the Book.

# April hath xxx days

The highst of the seven Egipt stars,  
Is Stationary, in a Tropicque Signe :

If *Holland*, and her Neighbour, smart by Wars,  
Let them look to't; the danger's none of mine.

If *England* keep but from a Sickness free,  
Then *England* will a happie Kingdome be.

Sir H. Slingsby Dr. Hewy sent. 1668  
New Moon at 10 in the morning

K. Ch. r. taken from Holmby 1647  
Lord Goring's Army at Bow 1648  
Judge Rolfe's resigns commil. 1655

Sir H. Slingsby Dr. Hewy beh. 1658  
Ludlow surrendered 1646  
First quarter at 4 in the morning

Dudley-Castle relieved 2  
Borstal-house taken 1644  
Sir Henry Vane beheaded 1662  
The fatal battel at Knaishby 1645

Full Moon at 10 in the morning

Oxford Treary ended 1646  
Dublin in Ireland besieged 1649  
Adderton-heath-fight 1643  
Oxford surrendered 1646  
Last quarter at 1 after noon

A fight at Cropredy-bridge 1644

B

July hath xxxi days.

Six Oppositions of th' Erratick Stars;

And two Eclipses in this month you'l find:

The Great Turk's worsted in his present wars,

His body to the Grave (perhaps) design'd.

Poor Christians, suffer great Calamities,

From Turks among themselves; They are so wise!

# August hath xxxi days.

After the last Months fiery adions, here  
Some sober Treaties are a drawing near :  
Fair promises are made on every hand,  
Yet few believed, as affairs do stand :  
Grave Chironus turns the Scale ; the offers made,  
From his confirming hand, acquire most aid.

E. Effex worsted in the West 1644  
 Oliver Cromwell dyed 1658  
 See the Astral cause thereof, in  
 his Nativity, published among  
 the quarterly at 5 in the morning.  
 my Collection of Genitures.  
 Princess Elizabeth died. 1650  
 See her Nativity in my Colle-  
 ction of Genitures.  
 13 d. Earl of Effex dyed 1646  
 Henry D. of Glouc. dyed. 1660  
 full Moon at 6 in the morning.  
 The reasons of his death, are to be  
 found in his Nativity, printed a-  
 mong my Collection of Genitures.  
 Treaty in the Isle wight beg. 1648  
 See fig. thereof, in the Nat. of late K.  
 answer-week. This time is appoin-  
 ted by the Church for Christians to  
 fast, to the end, that as the Autumn  
 bringeth forth the fruits of the pre-  
 ceding Summer, so they should bring  
 forth the fruits of Repentance to-  
 wards God, of Piety and Love one  
 unto another.

# October hath xxii days.

October makes the sturdy trees to yeeld  
 Their graceful leaves unto their Mother Earth;  
 Forceth the Northern Armies t' leave the Field;  
 Until the Spring their courage gives new birth.  
 This commonly it doth: but part on't now,  
 Like friendly August (very neer) will show.

## Observations.

Long Parliament began 1640

First quarter at 4 after noon.

4 d. Duke Ormond made 1661

Lord Lieut. of Ireland 1661

Dennings; cast. reliev'd 1644

& siege rais'd by the K. 1644

Full Moon at 5 in the afternoon.

12 d. Brainford-fight, 1642

Last quarter at 9 at night

The illustrious D. of York 1661

return'd from Dunkirk 1661

Princess of Orange died 1660

New Moon at 6 at night.

John James executed 1661

Isle of Wight-Treaty ended 1648

Princess Orange interr'd 1660

in H. 7's Chappel 1660

# December hath xxxi days

Thus have I brought the Head o' th' Snake to th' Tayl;  
 From the Beginning, I am come to th' End;  
 Heaven's the Chart by which my Muse doth sayl;  
 Divine *Urania* is my Guide, my Friend!  
 From her I have deriv'd these short Essays;  
 Be She but pleas'd: I scorn all meaner Praise.

**Fulica**

Log. br.  
ho. min

E. of Peterburgh to Tangier 1661  
First quarter at 2 after noon.  
Kings concess. vor satisfact. } 1648  
Members impris. & seclud. }  
Mr. Tym died 1643  
Full Moon at 8 in the morning.  
O. Cromwel (having dissol-  
ved the perpetual Parl.) } 1653  
makes himself Protector }  
Last quarter at 5 in the morning  
Ember-week. This is the last of  
those four times in the year (called  
Anni quatuor tempora) which the  
Church hath appointed jejunal or  
fasting days. And now enjoyed by  
fit example of Nature; because a  
New Moon at 5 in the morning  
the leaves at this time fall from  
trees, and vegetables of most kind  
die; so vice should lose its vigor in  
us, and superfluities prescinding from  
us.

*A Table of Essential Dignities.*

**ADVERTISEMENTS.**

**M**ORBUS Polyboros, & Polymorphus: A Treatise of the Scurvie; examining Opinions and Errors concerning the nature and cure of this Disease. By *Everard Maynwaringe* Dr. in Physick. Sold by *Tho. Basset* under *S. Dunstons* Church in Fleet-street.

**T**HERE is lately made publike a Book intituled, *The Mariners Compass rectified*; containing Tables shewing the certain ho. of the day, the rising and setting of the Sun and stars; and of Amplitudes: all calculated from the Equinoctial to 60 degr. of lat. With Tables of Latitudes and Longitudes, after a new order. By *Andrew Wakely*. To be sold by the Author on *Redriff-wall* near the Cherry-garden-stays, and by *Mr. G. Hurlock* under *S. Magnus-Church* near *London-bridge*.

**A** Sovereign Internal Balsam for all distempers of the Lungs, as difficulty of breathing, Ptilick, Consumption, &c. to expel wind, help digestion, preserve from infection: prepared by *Thp. Ser* of *London* licensed *Physic*. To be sold by *Thp. Fyde* Apothec. at the *Fox* in *Bishops-gate-street*.

What part the Moon governs in mans Body,  
being in any of the Twelve Signes.

Head and Face.

Neck.

Brest.

Bowels.

Secrets.

Knees.

Arms.

Heart.

Reins.

Thighs.

Legs.

Feet.

- ♈ Mans Head and Face, Heavens Ram obey ;  
 ♉ His Neck, the Neck-strong Bull doth sway ;  
 ♊ Th'arm-twinning Twins guide Hands and Arms ;  
 ♋ Brest, Sides and Stomach, Cancer charms ;  
 ♌ The Lion rules our Back and Heart ;  
 ♍ Bowels and Belly's Virgo's part.  
 ♎ Reins, Haunches, Navil, Libra friends ;  
 ♏ Bladder and Secrets, Scorpio tends.  
 ♐ The Half-hors'd Bow-man claims the Thighs ;  
 ♑ And to the Kid our Knees suffice.  
 ♒ Our Legs are but the Butlers Fees ;  
 ♓ The Fish our Footsteps oversees.

**D**R. Turners famous Dentifrices, which make the breath sweet,  
fasten the teeth, making them as white as Ivory, and cure  
the tooth-ach, are sold by Tho. Rooks at the Lamb at the East-  
end of St. Pauls.

**T**He said Tho. Rooks makes and sells the best Ink for Records :  
he also sells Mr. Cockers excellent Copie-books, and his Tu-  
tor to Arithmetick so long promised. Mr. Hodder's most easie  
book of Arithmetick is by him likewise a third time new printed.

**T**He Reverend Dr. Spark (in his *Primitive devotion*) very aptly terms *Easter*, *The King of days, and Queen of feasts*. It being indeed, the root, and original Feast, from whence all other Moveable Feasts spring. The word *Easter* (saith this learned person) is a compellation made up of a German and an English term, viz. *Oest* and *Star*; the former of which, the Saxons brought in among us, namely *Oest*, signifying the East, or arising: and *Star* we know imports a Luminary of heaven; the chief whereof at this time of the year, are in their Culminations; and both therefore most emphatically suited to Christ and his Arise (or Resurrection) whose name is the *East*, *Zech. 9. 12.*

Mr. Blunt tells us, *Easter* is so named of *Eostre* a Goddess of the old Saxons, whose Feast they kept in *April*. *Verflegan* saith the same; and that at this present, in *Saxony* it is called *Ostern*, which comes of *Ost*-*monat*, their and our old name of *April*, in which month this great Festival mostly happens: howbeit, we know it often falls in *March*, which is called the first month, or *Abib*, because of the Vernal Equinox happening therein; the Sun then beginning his race afresh, there saluting the first point of the Zodiack. Hence also it is, that our Church begins the year in this month, that the Actions and Observations of men on earth, harmonically might answer the Motions of the heavens. Formerly also Kings Reigns were accounted to have their beginnings in this month: whence one Poetically writes,

*Of Months and of New fruits is Abib father;  
Kings Reigns were reckon'd thence, and Feasts together.*

Thus far of the Name; now to the Thing. Of this eminent and sacred Feast, we shall finde three several kinds. 1. *Pascha Judeorum*, or the Jewish Easter. 2. *Pascha verum*, or the Easter we observe. 3. *Paschanavum*, or the Gregorian or *Romane Easter*.

The Jews Easter is called the *Passover*, from the Hebrew word *Pasach* (as some think) signifying to leap, or to pass over, or beyond; and was instituted *a.m.* 2447, and celebrated from the 15 day of the first month called *Abib*, to the 21 of the same, *inclusive*; i. e. for seven days together; yet so, as the 15 and 21 were held more sacred then the rest. These seven days were also called the Feast of *Azymes*, (viz. a time in which it was not lawful to eat leavened bread) and the first of them was called the *Pasche*, or *Easter*, *אֶת־הַפֶּסַח*, because on it the Paschal Lamb was eaten.

The *Pascha verum*, or the Easter which we observe, was ordained 322 years post Christ. For *Constantinus magnus* noting divers errors

errors and contentions among the Christians after the Apostles time, about the celebration of Easter, assembled from all nations 318 Bishops, and other learned persons, as well *Greeks*, as *Latines*, and *Egyptians*, such as could withal well determine of the motions of the celestial bodies, and were thorowly versed in Astronomy; among whom, *Eusebius* Bishop of *Casarea* was chief, being an excellent Mathematician: and this learned Bishop kept them there two years at his proper cost and charge. So that *anno Dom. 323*, they instituted a new *Golden Number*, differing from that of the *Romanes*. By this new Circle, this holy Feast should be celebrated not precisely at the first Full Moon of the first month, but, as one observes, *statim post*, presently after, viz. on the next Sunday following the first Full Moon after the Vernal Equinox, which then happened at or upon the 21 of March.

And here, by the way, let me acquaint you, that the Almanack-makers of this Nation were not mistaken the last year, in fixing Easter-Sunday on April 10. Neither did they therein differ, either from the Council of Nice, or the Rubrick of the Church: as a learned Divine, in a discourse writ upon that occasion, intitled *Easter not mis-timed*, hath most appositely observed. And because that discourse may not come unto the hands of every one, I shall presume to borrow a few words therefrom.

The Rubrick of the Church, with which our Almanacks, and the general Table of finding Easter for ever, agrees, says, *That Easter-day is the first Sunday after the first Full Moon which happens next after the 21 of March*. The Full Moon following March 21 last year, happened on March 31, being Thursday; and the Sunday following was April 2. Therefore by this Rule, say the Objectors, Easter-day should have been, not on April 10 but April 2. This were a sufficient demonstration, if the words [*Full Moon*] had the same meaning in both places: but the [*Full Moon*] meant in the Rule this year (speaking of 1664) is no other then the 4 of April; which being Moonday, the first Sunday after it must needs be April 10. which therefore, by this Rule, shall be Easter. If it be made a difficulty to admit such *Full Moons*, search the Mass-book which was printed by *Kingston and Sutton*, in 40, at *London* 1555, which was the second year of *Q. Mary*. The title of the book is, *Missale ad usum Ecclesie Sarisburiensis*. It contains no such Table of Moveable feasts readily calculated, as our Liturgies are wont to have: but in stead of it, there are Rules for finding the Dominical letters, the Leap-years, the

*A short Discourse touching EASTER.*

Moveable feasts, the New Moons, and Easter. Easter-day is there found by New or Full Moon, with these directions.

*Carmine docemur per Nevlunia invenire Pascha.*

*Post regum festa, quare Nevlunia trina*

*Post Dominica ter.ia, Pascha sacrum celebra.*

*Aliud. Post Veris Equinoctium quare plenilunium :*

*Et Dominica proxima sacrum celebra Pascha*

*Non verius invenies, si mille legas Codices.*

The New Moon meant in those Verses, is not such as our Almanacks now profess to give us, namely, the ho. and min. of the true conjunction of the Sun and Moon: but it is only the day of the Moons mean conjunction, as it was above 1300 years ago; and is there found, merely by taking the day against which the proposed years Golden Number stands in the margin of each month. Thus far this learned Author.

But to return to the Nicene Council, where I brake off. This institution continued not above 7 years after that great Assembly had appointed it: for anno 330 there arose many differences between the Greeks and Romans about this account; which continued near 200 years: and then, in the reign of Julian, anno 337. one Dionysius Abbas, a noble Roman (as saith mine Author) begun to frame Tables of Easter, according to the minde and intent of the former Council, which he completed an. 332. And then, by the general Council of Chalcedon, it was enacted, That whosoever held any other Easter then that which the Statutes of Rome appointed to be observed, should be reputed and proceeded against as an heretic. And therefore unto the year 1582, (which was above 1000 years) no man durst presume to alter this Easter; although they apparently saw the Equinox slide backward, viz. from March 24. to March 11. (Now, now it is sometimes on March 9 or 10.) by reason whereof, it many times happens, that we have two Full Moons (I mean such onely as our Almanacks give, viz. two oppositions of the Sun & Moon) after the Vernal Equinox, before we can celebrate our Easter. Hence also it emergeth, that we have two Easters in less then an Astronomical year, viz. 365 days. As to instance, from April 10. which was Easter-day last year, to March 26. on which it falls this, you will find but 350 days. Hence likewise it is, that there is sometimes a month or five weeks difference between ours and the Romans Easter; as by revolving your Ephemerides of past years, may easily be found.

Now, in the year 1582, Pope Greg. 13. hoping so to correct the

Kalen-

*A short Discourse touching EASTER.*

Kalendar, as that the Equinox should not be subject to so great anticipation, &c. makes an alteration therein, and forms *Pascha newum*, or the new Easter; and the Romans (with some others) in obedience to his Bull, do follow the same, as the most exact. And this he doth, by subtracting 10 days from *Octob. 4* to 15. inclusive: which was (beyond question) a fair step to the discovery of the truth in this matter: for should the former account continue in use among us (as some of our Masters in Astronomy well observe) in process of time, our Saviour and *S. John Baptist* must needs exchange their Tropiques; and the Feast of Christs Nativity will fall in *June*, when the Sun possesseth *Cancer*; and that of *S. Jo. Bapt.* in *December*, when the Sun enters *Capricorn*.

But now, to avoid all inconveniences that we at present embrace, and that by our cherishing are like to increase (if we still strictly follow either the *Nicene Council*, or that of *Chalcedon*, or the alteration made by *Greg. 13.*) if (as a good Astronomer of this nation some three or four years since observed) all *Bissexiles* were omitted for 52 years, that alone would gradually and insensibly, without the least inconvenience, bring us two days before the *Gregorian* account, and be agreeable to the Sun's place at Christs birth; whereas the *Roman* account (though now the best) would be two days less exact; that being only reduced to the Council of *Nice*. And if after that, the *Bissexiles* be kept as before (except in every 132 years, wherein one Leap-day must be exempted for ever) or else, that one Leap-day be struck off every 100 years (except in each 400 years) for ever; there would need be no more, to have our Christian Festivals kept according to primitive observation: for by supposing the Tropical year to be (after *Bullialdus*) 365 d. 5 h. 49 m. 4 sec. 21 th the annual redundancy allowed it by *Cesar*, will be 10 m. 55 sec. 39 th which compleareth one day in 132 years, and but 2 m. 25 sec. 48 th over; and three days in 400 years, with 5 m. over: which makes but one day in 11294 years, a matter very small & inconsiderable.

More of this might have bin said; but my room being small, and appointed for other matter, enforceth me to an omission. A further account hereof the Reader may therefore expect, either in a discourse by it self, (wherein I intend an Explanation of the Kalendar at large, and to shew the original and use of all the Fasts & Feasts therein contained) or else in my *Body of Astrologie*, in which work I have already made a considerable progress. In the

earned by my merits.  
quinox.  
P. M.  
ny Do.

In my *Dies novissimus*, or *Dooms-day*, not so near as dreaded, I have at large proved it impossible for any man to deduce Astrological Judgments from the Conjunction of the two superiour Planets  $\text{H}$  and  $\text{M}$ ; and that by several Arguments. 1. Because it is very rare or seldom that such celestial congresses are celebrated; and therefore the little experience of short-lived men can afford no foundation for such predictions. 2. Chronologic (which in these matters is most adjuvant to Astrologers) is uncertain; and therefore no sure ground for them, whereon to raise a Judgment upon what hath succeeded such Conjunctions past. 3. It is impossible to obtain the position of heaven, when such Conjunctions happen: and to pretend to give Judgment without a Figure, is as vain, as for a Pilot to guide a ship without his Compass. 4. Should we allow Chronologic certain, yet the Artist being a man, and subject to errour, is very like to be catched with a *non-cause*, in stead of a true cause; & ascribe several matters to the  $\text{J}$  of  $\text{H}$  and  $\text{M}$ , which may in truth be the effects of Eclipses, or other less conjunctions, transits, vernal ingresses, &c.

If therefore (like some others) I do not stuff my sheets with such groundless and uncertain matter, to puzzle and confound the Readers, I hope they will both easily and readily excuse me. I conceive it not hard for any man to write Astrological Romances, that is but acquainted with the terms of Art: but I affect not jesting with serious things, nor yet to make loud noises of what is never likely to succeed, or to amuse the world with fictions and forgeries; thereby preventing others calling me *lyer*, and make my book perform that office daily to me, *gratis*.

Come we then to treat of what hath a verified and approved foundation, viz. the constitution of this present year 1665. and that from the Figure foregoing, calculared to the Merid. *London*.

$\text{H}$ ,  $\text{D}$ , and  $\text{Q}$ , will be sharers in governing this year, as having greatest strength in the Figure. Very probable it is therefore, that the men and things they respect, will enjoy much happiness, increase and augmentation. The condition of the common man will be good, notwithstanding the covetousness of  $\text{H}$  is such, he will be always grumbling and repining. As  $\text{H}$  is *Superiorum altissimus*, so he hath signification of the highest & most eminent of persons, as Emperors, Kings, Princes, Electors, Dukes, &c. but should I mention his signification in the second house, O! how it would grate the ears of a wilful, stubborn, and obstinate people!

Let

*A brief Judgement of the YEAR.*

Let us consider ☉ then, the royallest of the Planets, to be the significator of Kings, &c. who in our Figure is placed upon the cusp of the fourth house, casting an ☿ to the angle of greatness, honour and dignity; but emits a gracious and friendly △ to the Ascend. whispering (in the Stars dialect) this certain truth, *That Emperours, Kings, &c. will be more indulgent, loving, and kind unto their subjects, then careful of themselves, or covetous to advance their own interests; or indeed, then their subjects will be loyal and obedient to them.* Yet must I withal tell the commonalty, that their Kings, &c. will this year make a more serious inspection into their respective Coffers & Treasuries, their Customs, &c. and not suffer themselves to be so egregiously cheated as formerly.

That the year in general promises much good to the count y-man, and common people of all kindes, is very conspicuous; for ♀ lord of the second is very strong therein, and ♀ lord of the Ascend. is locally in the second also; portending much good and happiness, and increase of gain to emerge unto them from their several industries in their several ways of profession, and by several ways and means unexpected, viz. by publike employments that by some honoured Patriots of Religion and Learning will be begun, for the setting of many of the poorer sort on work. Landlords also will generally be more kinde and less cruel to their poorer tenants then formerly, thereby encouraging them to labour and industry. All which happie significations are augmented by ♀ and ♀ their casting a friendly △, not onely to the second house, but unto the lord thereof, and ⊕ there. Such happie Configurations seldom happen!

Grain of all kindes, and fruits, &c. will be plentiful; and England is like to be blest with a happie harvest: but I fear, unless Authority take great care to prevent it, we shall have the price thereof (of Corn especially) exceedingly enhanced, and that by the covetousness of some earthly hearted men, who will hoard it up; to the grinding of the faces of the needy; as also by too much transportation of the same into other countries: a reasonable anticipation whereof, will be of universal emolument to this Nation. For if it be true, that the strength of a Planet raiseth the price of the commodity it signifies (which all Astrologers agree in) then the strength of ♀ in this Vernal Figure, certainly presages that the price of Wheat, Rye, Barley, Malt, and all things growing on the earth, &c. will be considerably in-

creased: Coles also, and other Minerals under  $\text{H}_2$ , together with Wood and Timber, will bear a proportionable rate.

And it will not onely be thus in inland-commodities, and of our own growth; but in others, which we have the advantage of by the noble adventures of our worthy Merchants and Sea-men into forraign parts; as in Silks, Cloth, Sugar, Wine, Figs, Raisins, &c. ♀ is their natural significatrix, and very potent in the fifth in  $\text{J}$  of  $\text{D}$  there. *Vis unita fortior*: their price will therefore rise.

And if some ignorant pretenders to this Science (who I finde are apt enough, either with cause or without, to carp and cavil at my writings; and yet, I suppose, were it not for many of my Works, those pitiful findfaults had scarcely ever known truly there had been such things in nature as 12 Signes & 7 Planets; yet if such, I say) shall desire to know a more immediate reason of this my Judgment; I tell them, that the Seas will be infested with many Pirates and Robbers, which will infinitely obstruct the Maritime trade, and consequently the transportation of such commodities as I last mentioned; and so their price will come to be raised. But, may some say, How shall we know this beforehand to be true, having nothing but your bare word for it? Well! be sure now, that you be but as exact and strict with others that write, and I will promise you, that I will not, either now, or at any other time, impose upon you in any thing, but will satisfy your curiosity. - The ☉ is lord of the ninth, the angle of Sea-voyages, &c. and he is in ☐ of  $\text{H}_2$  lord of the second, from the second and fourth, in Cardinal and Tropical signes. And now you have my Reason: if you will cavil, you may.

Be therefore careful, all ye Merchants, how, and in what manner, at what time, with what manner of persons, and unto what place or places you deal this year! Consult (if it be possible) your own Nativities; your general significator (I assure you) is very weak; a little Astrologic (would you take pains in it) may prove more advantageous to you then your Insurance-Office.

But because many matters are expected from my Pen, I transfit this discourse of our own Nation by it self; and come next to consider its condition in its relations, viz. Scotland, Ireland, &c.

That we shall be quieter, and live happily and friendly with each other, there is no question. But I fear me, (having good ground so to do) that Scotland will be subject to great sicknesses and mortalities; the death of many of their eminent men is seriously

*A brief Judgement of the YEAR.*

riously threatned : Colds, Pilefish, Coughs, Consumptions, Inflammations, corruption of blood, Lasks, Fluxes, &c. will be very rife and frequent among them. And if I should adde a scarcity of provision, &c. I have a considerable warrant for it. For  $\odot$  their Ascendent is now become Descendent on the Cusp of the house of death and mortality, viz. the eighth house ; which *Ludovicus de Rigiis* saith, is the most cruel and malicious in all things, of the whole Zodiacal Circle, *Aphor.* 35. Besides,  $\text{H}$  (not onely the enemy of Nature in general, but to them in particular) is in  $\text{VP}$ , in  $\text{P}$  to their Ascendent ; and so will continue neer three years together afflicting them. When he was in  $\odot$  in anno 1611, &c. we all remember the cruel mischiefs that nation underwent ; which was very apely predicted by my good friend Mr. *John Booker*, in his *Almanack* of that year ; where in his *Januaries* Observations, he had a pithy piece of Poetry which, because it suits so appositely with my present discourse, I shall (with a little variation) insert.

*Who dares deny that good or bad effects  
Can be presaged from the grand Aspects  
Of Stars and Planets ? Let such view teh Sun  
Now squaring Saturn : The poor Scot's undone !*

*'Tis true, sometimes we miss, of what ? where ? when ?  
As others do : for we are all but men.*

Let us next consider how the heavens favour the state and condition of *Ireland*. The  $\text{D}$  being in  $\text{G}$  of  $\text{Q}$ , their natural significatrix, in their true and proper Ascendent  $\text{X}$ , in a friendly angle of heaven, viz. the fifth house ; declares that nation to live happily, merrily, and free from all eminent troubles and vexations, this year : and both of them being in  $\Delta$  of  $\text{H}$  (who is *dominus Anni*) shews the commonalty of that kingdom active and industrious, in managing and tilling their ground ; of which there is very great hope, they will reap a pleasant and comfortable Crop. Many new edifices and buildings will be by them this year raised ; perhaps a foundation unto some new Town or Towns, &c. possibly also some old ones bettered in their Charters, Corporations or Priviledges : And the honourable Governor, or Lord Lieutenant of that Nation, notwithstanding some petty murmurings and discontents, will for that reason live more happie, enjoying greater affection among, and more obedience from that people, then many his predecessors.

Now,

*A brief Judgement of the T E A R.*

Now from our neighbour-nations, I shall assume a little liberty (with  
our) of flying further abroad. And this year being the eve (as it were)  
of that great and eminent year 1666, so notoriously talk'd of by many  
foreign Astrologers, as well as by some (as little wise) among us, to carry  
such dreadful horror, and horrid significations in it! As; that the Em-  
pire of Germany must be destroyed by the Turks; and the ruine of Rome  
and the Papacie this year must also come; *cum multis aliis*: I shall (with-  
out the favour either of *Flaccianus*, *Newbarthus*, or *Eerarius*, or  
any other Enthusiastick Artists) touch these matters a little, & but little.

And first I must acquaint the world, that Astrologie hath its hereticks  
as well as Religion; and many things are by many pretenders thereunto  
fastned upon the Stars, which the sober Astrologer would blush to own;  
as well knowing the pure and demonstrative rules of his Art do not in  
the least countenance or encourage them. If any man shall pretend to  
prove that year more prodigious, and to be laden with more Miracles  
and wonders than other years, I presume he will finde some more mighty  
and extraordinary celestial *Phænomena* therein, then other years afford:  
and if he cannot, he must acknowledge himself (or give us leave at least  
to esteem him) an Impostor. That there are not, will not be more emi-  
nent Configurations in that year, then in others, nay hardly so eminent,  
I assert; and that there should be more prodigious & monstrous actions  
happen therein, there is no reason for us to believe, nor any ground for  
any sort of persons to fear. It will no question be a year of a much  
milder countenance than many suppose, or (without sure ground) very  
liberally report. Nor will the Turks be so all-conquering as supposed:  
I rather conclude them subject to the unfortunate *Polanders* late cruel  
fate. In my *Dooms-day* not so near as dreaded, &c. I have taken notice of  
the time (so neer as could be collected) of the Turks invading the Em-  
pire; and, by reason of the infortunacie thereof, have (after serious en-  
quiry into the matter) predicted, that the Empire of Germany will be so  
far from being over-run and destroyed by the Turks, that the Turks  
themselves will be forced to retreat, or be driven back again, with emi-  
nent and considerable loss and damage.

I know very well, that the Emperor of Germany, at the time of his be-  
ing invaded, had his *Med. & ali* directed *ad oppos. Solis*: And I also know,  
that that direction is now over; and that the Grand Seignior hath now  
his *M.C.* directed *ad conv. Martis*, and this in *Scorpio*, a fixed and violent  
Signe. And *Saturn* also is coming upon his Horoscope, and upon the ra-  
dical places of both the Luminaries, there to continue neer three years  
together. Which considered, I shall not (I suppose) disparage Astrologie,  
if I again predict the retrogradation and ruine of that great Potentate  
in this his undertaking against the Emperour, any more, then when (at  
far greater odds) I foretold the death and destruction of the King of  
*Sweden* in 1658, when he was in his greatest glory; having not onely in-  
vaded the King of *Denmark's* territories, but then blocked up that great  
Prince in his chief citie *Copenhagen*. This year it self, as to the German  
Empire, will tell the world, that the next, *viz.* 1666, there will be no such  
wonders perpetrated, as are idly brui'd abroad concerning the same.  
The Emperour and the Electoral Princes will unite, and boldly acquit  
them of their enemies: nor will the house of *Austria* suffer that perdi-  
tion, &c. that some imagine, and groundlessly threaten.

And

And whatever any (under pretence of Astrologie) have wrote, of the ruine & destruction of *Rome*, to happen either in, or by the ensuing year 1666; I am so far from shaking hands with, that I utterly disown, and protest against the same: chiefly, that flying report, that I should add any thing in my writings toward the support of such rash and groundless assertions. True it is, in my *Collect. Genit.* p. 75, I printed the Nativitie of *Alexander 7.* the present Pope; and did therein predict unto him much misfortune to happen in his grand Climacterical year: which how well it was verified, in the difference he had with the valiant and active French King, anno 1663, & 1664, I need not report, since it is yet fresh in every mans memory. And upon the direction of his Sun *ad oppos. Saturni*, came & sine latit. I well remember that I inculcated a possibility of that great and eminent Churchmans death. That he was dangerously ill, an. 1664, the *Gazets* or News-books by several Letters informed us. And if he do live unto the middle of this year 1665, my prediction is not much to be blamed: but if he shall pass the whole year free from the Stone, Consumption, Lethargie and Apoplexie, (all of which he should be strongly accosted with; and I am apt (yet) to believe, even unto death) I shall then say, my judgement in Art hath failed me: and the effects of directions are otherwise to be studied and considered, then at present they are by the ablest Astrologers in the world.

Howbeit, I utterly deny that ever I predicted (or ever intended by my publishing this illustrious persons Geniture, to predict) the downfall of the Papacie, or the destruction of *Rome*! (Astrologie hath not attained yet unto such perfection; and (with favour of the learned *Gauricus*) I suppose neither the radix of that great citie, nor the original of that religion, is known unto Astrologers.) Nor is it a good or natural consequence, for any man to urge, That because I predict the death of the Pope, I must therefore presage the destruction of the Popedom! I disdain such fanatick and Quaker-like conclusions, as having no more sap or marrow in them, then if one should infer, from the death of a Governour of a town, or master of a house, the infallible and certain ruine of the places over which they commanded.

And so (being confined to this scantling) I conclude. And now Reader, I hope thou wilt excuse me that I have kept to my theme. I have not (I confess) wandred, as wanting matter; or told what the Prince of *Transylvania* hath done, or is doing; or given a narrative of *Abassii's* direct & retrograde proceedings; of the designs of the *Persians*, or the victories of the *Muscovites*; how Count *Serini* hath behaved himself against the Turk; how every Empire, Kingdom or State is either offending or assisting each other; how the *Dutch* affront all Nations; or when the *Spaniard* strack'd his beard. These things, and more, I have purposely omitted; as knowing Astrologie and History to be two distinct things. Let *Martins* and *Mercuries* do what they please; whatever they have, I have no warrant for such matters; and I am sure Astrologie affords none.

The Art of Astrologie, in all its Parts, is taught by  
From my House in *Jewen-Garden*,  
against the Sun in *Jewen-street*.

JOHN GADBURY.
